- e- Freedom of expression is a \_\_\_\_\_ that must not be violated. (duty/ right)

### **SECTION C: COMPREHENSION (10 mks)**

Read the following passage carefully and answer the questions that follow it. Use your own words as far as possible.

#### **Diabetes: the silent killer.**

The world is full of changes and surprises. Diabetes is fast becoming a disease of the youth. Ten years ago students were taught that this disease could not be found in people less than 40 years old. Now it is being seen in people under 10. The increase of diabetes among youths could sometimes be seen as a result of genetic predisposition. Weight and environment also play a role.

As people become busy and work more out of home, so also do their eating habits change. They have been a number of changes in foods habits and activity patterns over the last 20 years. These include increased reliance on foods consumed outside the home, increased consumption of soft drinks and fast foods, reduction of physical education in schools.

Diabetes cannot be reversed. Once you have got it, you only have to learn to live with it. Therefore, it is wise to follow the advice one of teenage sufferer, who simply states "Stay away from junkie foods and stay fit." It is estimated that all over the world, more than 140 million people have eating disorder. According to the World Health Organization, that number can double by the year 2025. Experts say this could be the beginning of an epidemic. Treatment for diabetes is made more difficult because a person can have the disease a long time before it is diagnosed. Early symptoms are relatively mild and as such diabetes often goes unrecognized. Hence, diabetes has been dubbed "the silent killer".

Diabetes has been called "a disorder of the very engine of life" and for good reason. This is simply because the body machine is unable to carry out its function. When the body cannot eliminate glucose, a number of vital mechanisms can break down, sometimes with life threatening consequences. Dr. Harvey observed that people do not directly die from diabetes, rather they die from complications. A good job can be done in preventing the complications but a poor job of treating them when they occur. The complications could include heart disease, stroke, poor kidney function, peripheral arterial disease and nerve damage. Poor blood supply to the feet can lead to ulcers which in severe cases require amputation of the limbs. Diabetes is also the most frequent cause of blindness in adults.

Although type one diabetes cannot be prevented, scientists are studying the genetic risk factors. They are trying to find ways to suppress an immune attack. Type two has much brighter picture. Many of those who may be genetically susceptible avoid showing any sign of this disease. Simply by eating a balanced diet and exercising regularly, thereby staying physically fit and keeping their weight within normal limits.

**QUESTIONS:**

1- Give four causes of diabetes mentioned in the passage. (2 mks)

2- "Diabetes cannot be reversed." What is the meaning of this sentence? (1 mk)

3- Why is diabetes considered as a silent killer? (1 mk)

4- List four complications that a diabetic patient is likely to have? (2 mks)

5- How could a type two diabetic patient control the spread of this disease? (2 mks)

6- In your opinion how can environment influence someone's health? (2 mks)

**SECTION D: Composition (10 mrks)**

**Write an essay between 200 and 250 words on any ONE of the following topics**

- 1) Students in your school use and throw plastic papers and containers everywhere. They may not even be aware of the dangers they are causing. As the president of the Environment Club of your school, you have to address the educational community on the occasion of the celebration of the World Environment Day. Write a speech to teach them the dangers resulting from such acts, how to avoid them and the importance of protecting their environment.
- 2) Write about any disease of your choice. You will present its transmission means, symptoms and complications. You will also talk about how the disease can be treated and efficiently prevented.
